

Case Study

A rapid application development platform for Africa based Insurance service provider

A rapid application development platform for creating, customizing and distributing applications, with virtually no-code

A rapid application development platform for creating, customizing and distributing applications, with virtually no-code

Business Requirements

1. It is a designer environment that supports citizen developers and business users to create custom applications that work across environments and devices.
2. A point and click application that runs in an integrated online environment.
3. An effective tool in the hands of organization to quickly operationalize business applications.

Our Solution

1. Development of platform with a form-rendering engine
2. Hybrid mobile solution to consume forms
3. End to end work-flow for business users.
4. Development of smart reusable library
5. Offline support: The forms can be accessed and data submitted even when the application has no connectivity
6. Device Independent: Open the applications on multiple channels for both delivery and acquisition of content
7. This platform supports to integration with customer systems
8. A complex, highly secure, multi-layered security model

Business Impact

1. Introduction of "Prototype driven development" approach
2. Single platform that allows development of applications that cuts across devices, and style (native, hybrid or web).
3. Customized platform with virtually zero code
4. Reduce time and cost for application development
5. Smart Library to publish integration libraries to various systems for greater re-usability
